

Fezz Audio Luna Integrated Amplifier- A Modern Interpretation of Tube Excellence

The Fezz Audio Luna Integrated Amplifier is a distinctive expression of what contemporary tube amplification can achieve. Designed and manufactured in Poland, the Luna brings together traditional vacuum tube musicality with forward-thinking engineering, resulting in a listening experience that is both emotionally engaging and technically refined. It is not simply a nostalgic nod to classic audio—it is a reimagining of tube performance for modern systems.

Toroidal Transformer Technology - A Rare Advantage in Tube Design

At the heart of the Luna lies one of its most unique features: toroidal output transformers, developed in-house by Fezz Audio's sister company, Toroidy. This approach is highly uncommon in tube amplifiers, where conventional EI-core transformers dominate.

The benefits are immediately audible. Toroidal transformers reduce noise and electromagnetic interference while delivering improved bandwidth and control. The result is a presentation that maintains the natural warmth of tubes, yet introduces an uncommon level of clarity, speed, and bass precision.

Dual Sonic Character - Triode and Ultralinear Modes

The Luna offers the flexibility to tailor its sound through selectable operating modes:

- Triode Mode – Delivers a more intimate, harmonically rich presentation with classic tube warmth
- Ultralinear Mode – Provides greater power, dynamic impact, and control

This duality allows the amplifier to adapt effortlessly to different speakers, recordings, and personal preferences—effectively offering two distinct sonic personalities within a single design.

Modular Design - Built to Evolve

Recognizing the needs of modern listeners, the Luna features a modular expansion system that allows users to integrate additional functionality directly into the amplifier. Optional modules include:

- Digital-to-Analog Converter (DAC)
- Phono Stage for vinyl playback
- Bluetooth connectivity

This forward-looking approach ensures the amplifier remains relevant as system requirements evolve, eliminating the need for unnecessary external components.

Modern Connectivity - Seamless System Integration

Unlike many traditional tube amplifiers, the Luna is designed to integrate effortlessly into contemporary audio systems. Features include:

- Home Theatre Bypass
- Subwoofer Output
- Remote Control Operation

These capabilities position the Luna not only as a high-performance amplifier, but as a versatile centerpiece for a complete audio system.

Refined Sonic Performance - Natural, Dynamic, Engaging

The Luna's sound signature balances classic tube qualities with modern precision. It delivers a rich and expressive midrange, complemented by excellent transparency, controlled low frequencies, and a spacious, well-defined soundstage. The presentation feels immediate and lifelike, capturing both the texture and scale of music with remarkable coherence.

Exceptional Value - Engineering Without Compromise

By manufacturing its own transformers and maintaining tight control over production, Fezz Audio achieves a level of engineering rarely found at this price point. The Luna offers performance and build quality that exceed expectations, making it a compelling choice within the world of high-end integrated amplifiers.

Experience the Luna

The Fezz Audio Luna is more than an amplifier—it is a thoughtful fusion of tradition and innovation. For listeners seeking the emotional connection of tubes combined with modern flexibility and precision, it represents a truly unique solution.
